Type 2 diabetes Risk factors and complications

Type 2 diabetes can put you at risk for many life-threatening health problems.

Some risk factors and complications of type 2 diabetes may be more visible and easier to track by your doctor, while others may be lurking under the surface.

High blood pressure Risk factor Obesity Added stress from high blood pressure (hypertension) along with diabetes can About 80-90% of people with cause heart, brain, kidney and eye damage. diabetes are overweight or obese, complications such as heart attack and stroke.

Cholesterol

your risk for heart attack and

DID YOU KNOW?

Diabetes puts you at greater risk of heart disease and stroke. People with diabetes may develop heart disease 15 years earlier than those without diabetes, and 1 in 2 people with type 2 diabetes die due to heart disease.

You can help lower your risk of experiencing one by paying careful attention to your risk factors.

Kidney disease

A common and chronic condition in people with diabetes (known as nephropathy) where high blood sugar damages the tiny blood vessels in the kidneys over time, causing the kidneys to not work properly or even fail. arteries supplying blood to the heart

Eye damage

disease (PAD)

People with diabetes have an especially high risk for PAD - a narrowing of the arteries away from the heart that serve the legs, stomach, arms and head - which can increase your risk for CAD, heart attack and stroke.

Proper management of type 2 diabetes may help prevent or delay the onset of diabetes complications
