Learning Objectives

- To describe how cardiovascular risk differs between the sexes and which sex-specific factors should be used to assess risk
- To compare sex differences in heart failure, aortic and valvular diseases
- To distinguish cardiovascular symptoms from normal symptoms of pregnancy, and communicate the impact of adverse pregnancy outcomes on future cardiovascular risk
- To define the cardiovascular risks and benefits of hormone replacement therapy
- To relate the clinical presentation of SCAD, summarize the available therapeutic approaches to its treatment and recognize the role of cardiac rehabilitation in the unique population
- To list the considerations for cardiac interventions in women and how outcomes may differ by sexes
- To discuss the need for women and a more diverse team as trial investigators, and the requirement for greater inclusion in research participant

This event is an Accredited Group Learning Activity (Section 1) as defined by the Maintenance of Certification Program of the Royal College of Physicians and Surgeons of Canada and approved by the Canadian Association of Pathologists-Association Canadienne des pathologistes. You may claim a maximum of 4.0 hours (credits are automatically calculated)
