

# A Dementia Registry for Canada:

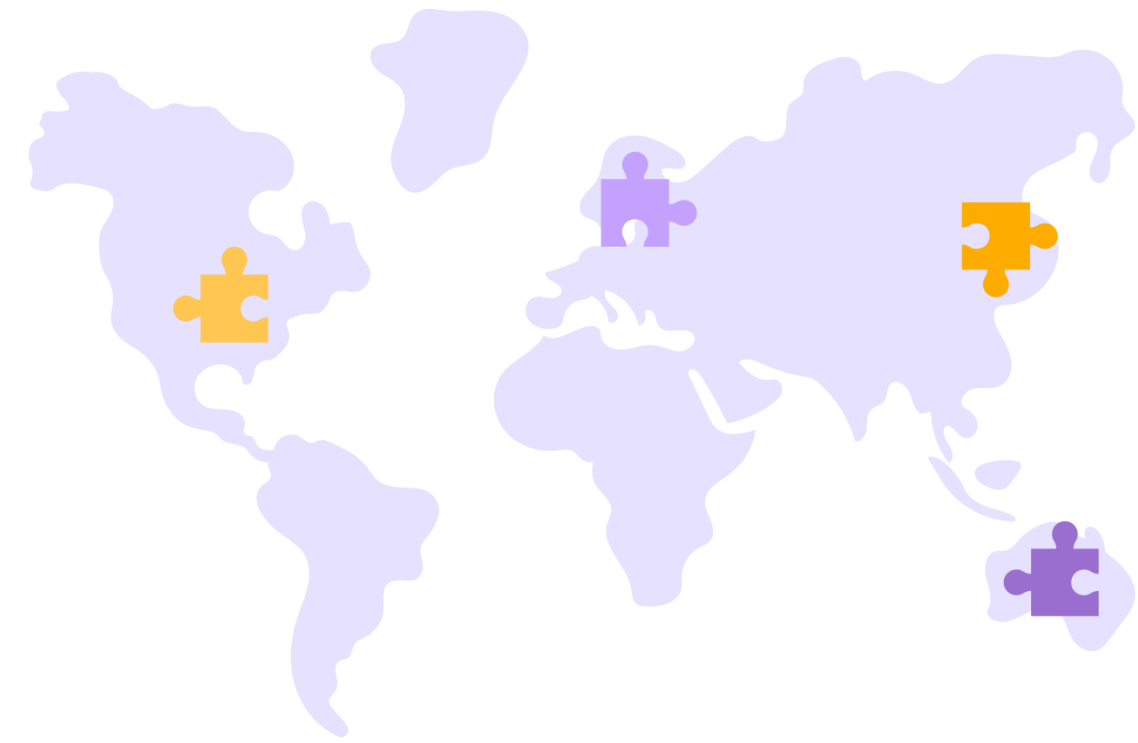

A community-driven, made-in-Ontario solution

## Methods

### Jurisdictional Scan

The Alzheimer Society of Ontario (ASO) commissioned a study of 18 surveillance and population-based dementia registries in high-income countries, analyzing 235 studies.

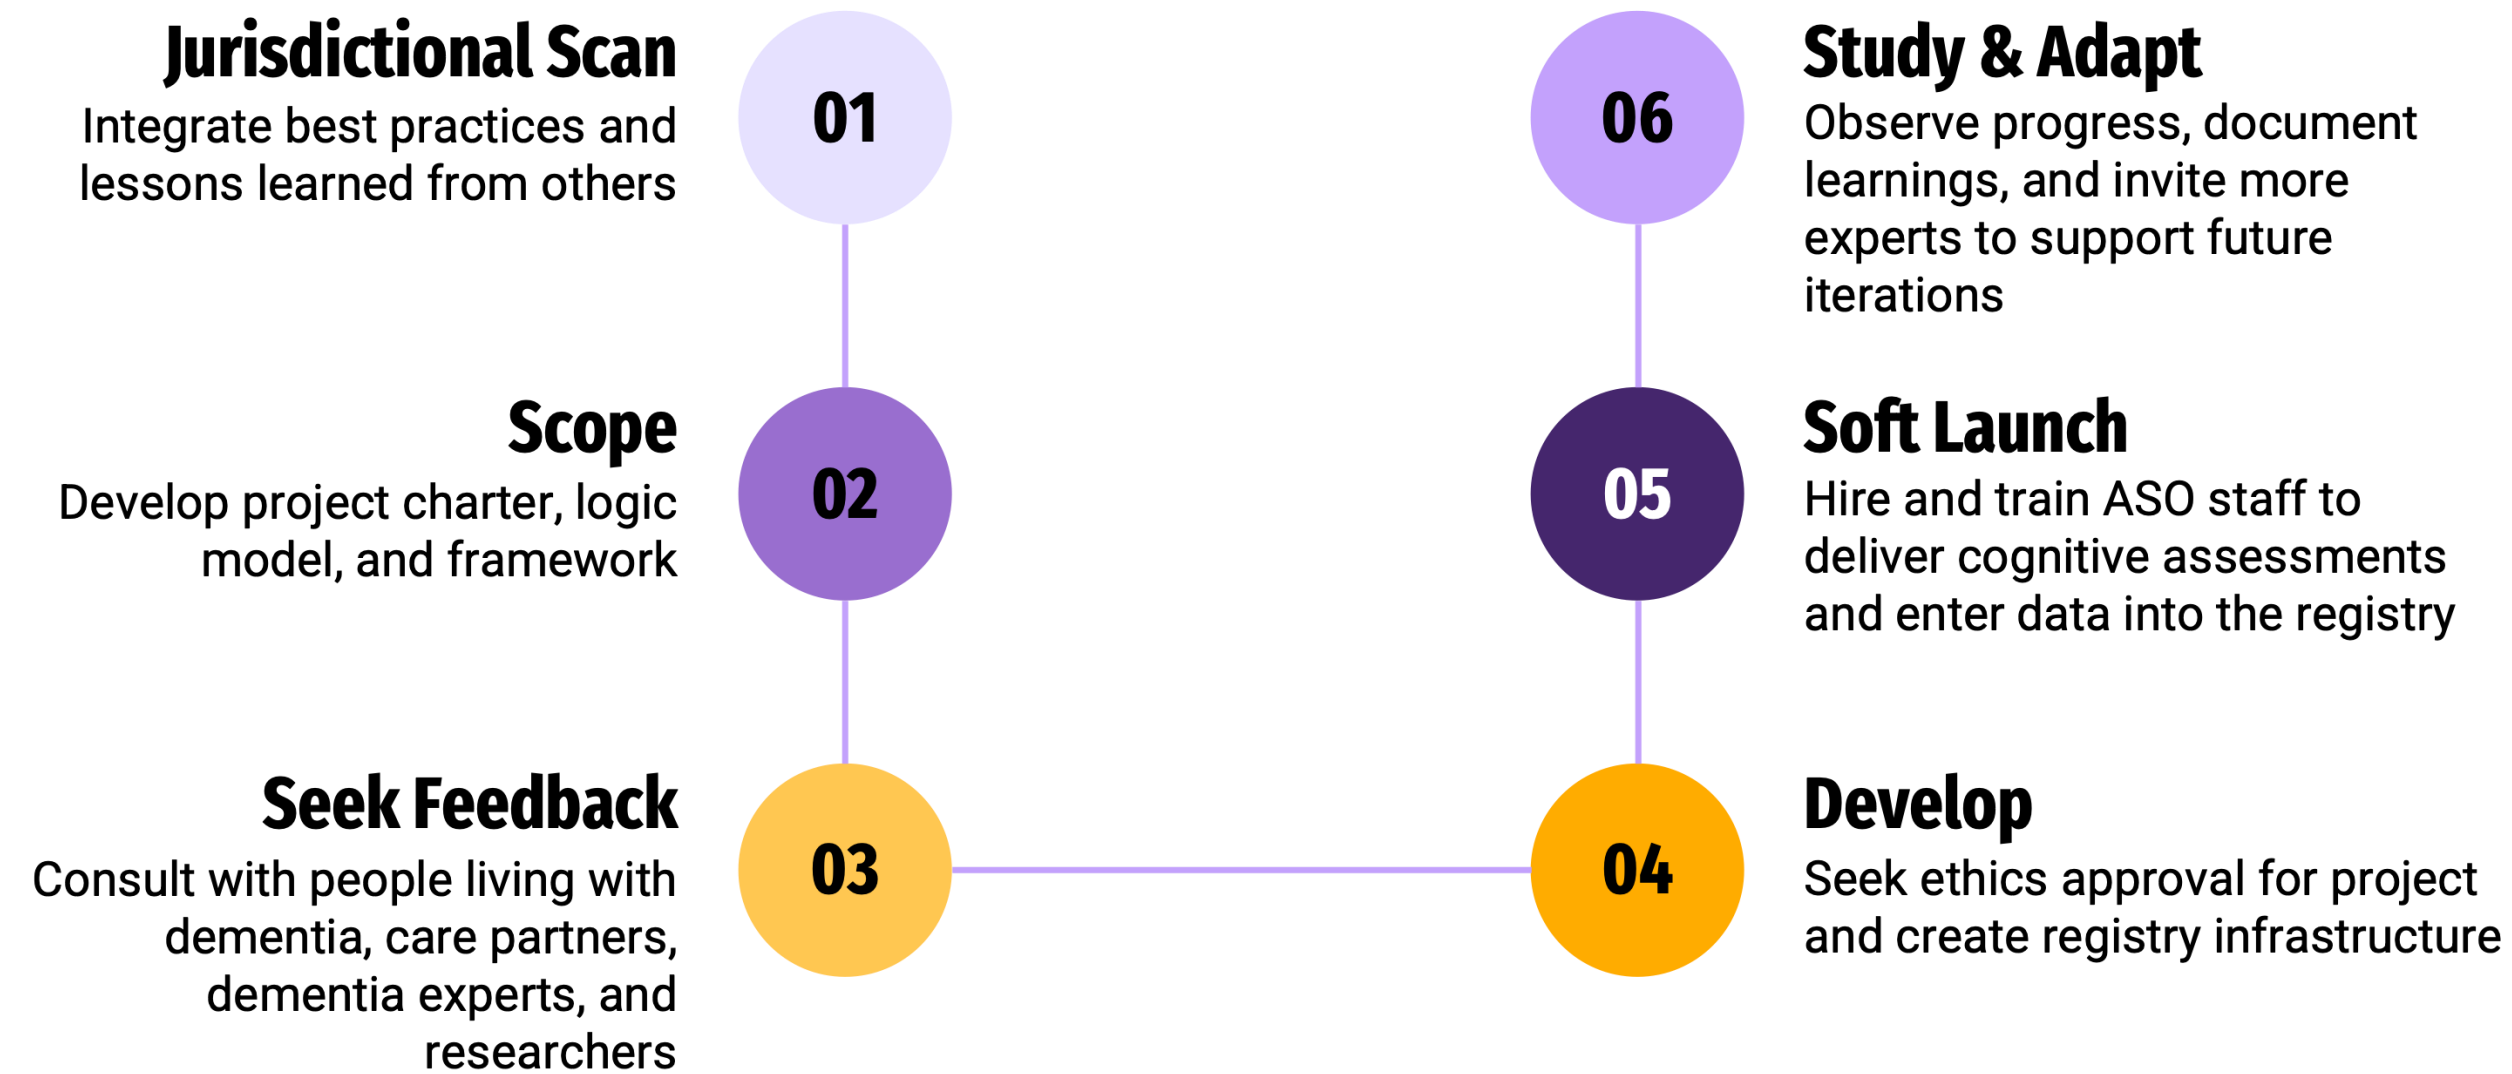

### Collaboration

In early 2024, ASO partnered with the Ontario Brain Institute (OBI) to investigate the feasibility, design, and implementation of a dementia registry for Canada as part of a readiness strategy for DMTs.

ONTARIO

## Process

## Background

### DMTs are (Likely) Coming

Two disease-modifying therapies (DMTs) for dementia are currently being reviewed by Health Canada.

### The Registry Landscape

Other countries have developed a centralized repository, or dementia registry, as a requirement for approving patient eligibility for DMTs.

### Service Gap

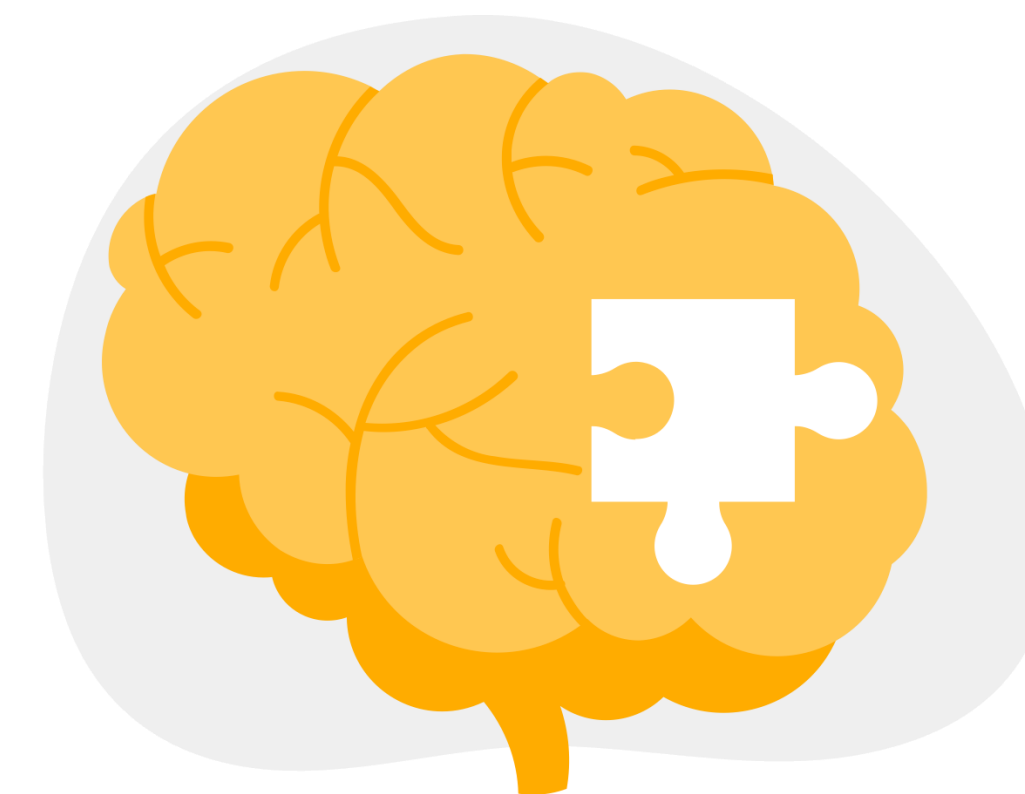

Canada does not yet have a dementia registry, but it is reasonable to assume this will be required.

### Opportunity for Collaboration

Ideally, Canada should have one dementia registry that: supports DMT eligibility, provides a trusted source for data, and acts as an opportunity for other dementia technologies to be tested and leveraged.

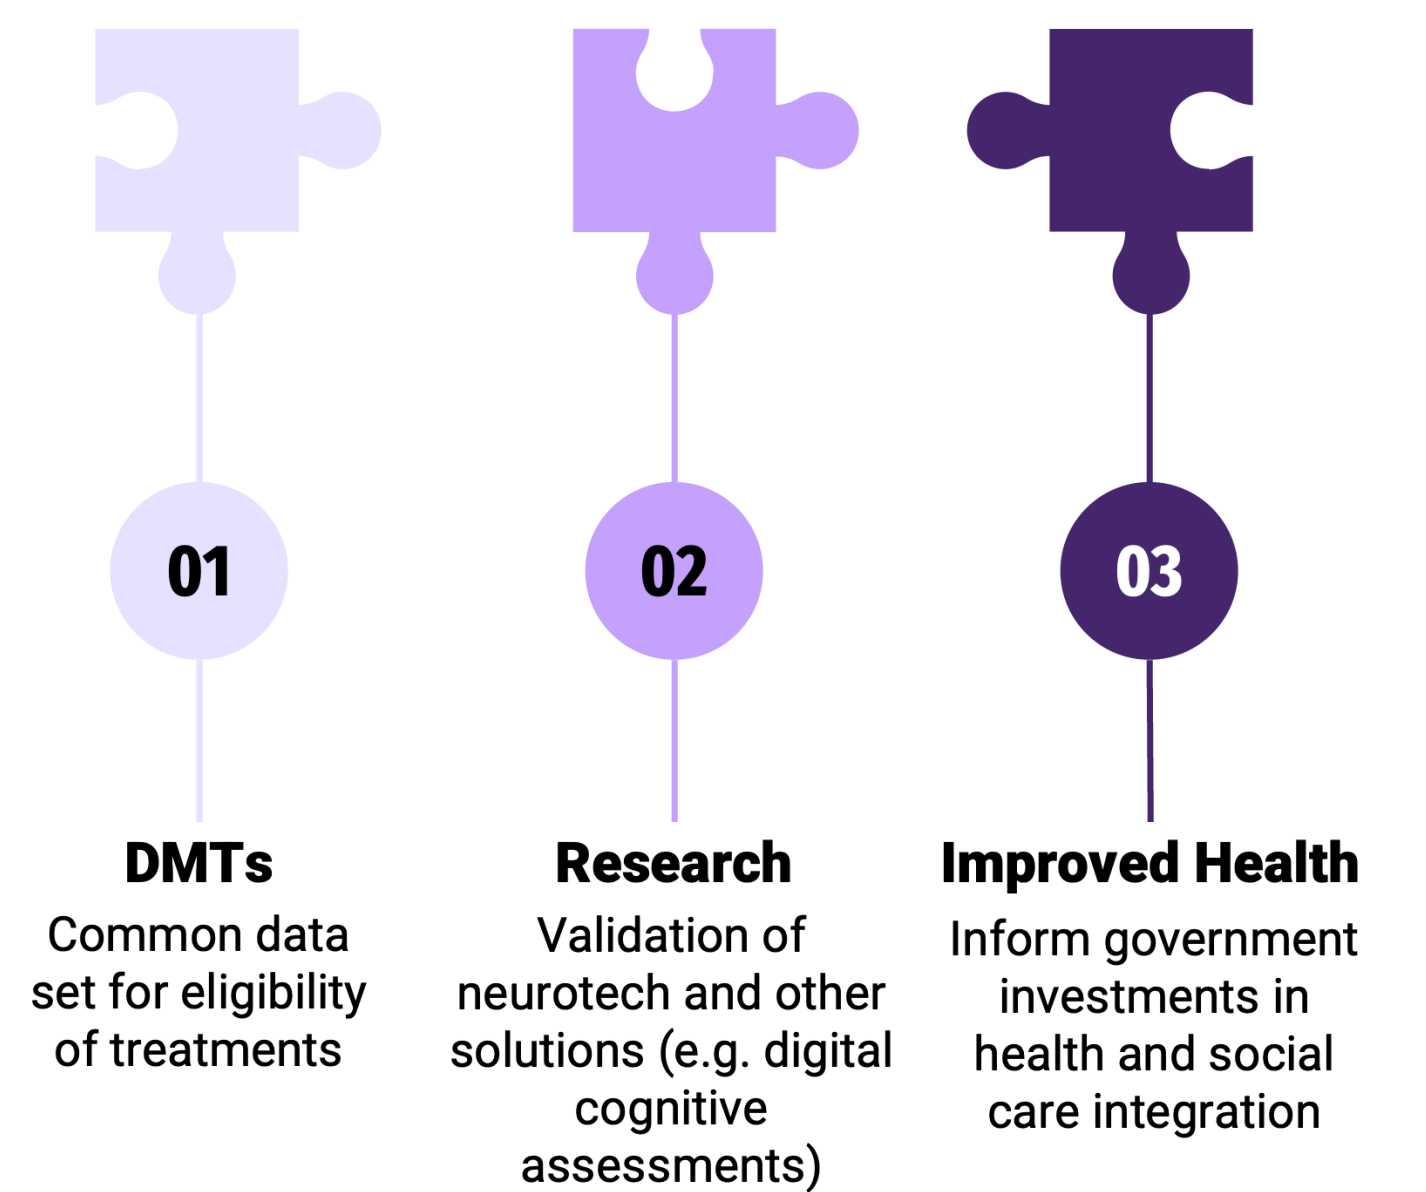

## Results

### Dementia Registry

Evolving and trusted repository of real-world data about dementia in Canada that enables:

Adam Morrison | MSc, CHE | Senior Director, Public Policy & Partnerships | Alzheimer Society of Ontario | amorrison@alzon.ca

Christina Stergiou-Dayment | M.S.W., RSW | Chief Programs & Clinical Operations Officer | Alzheimer Society of Ontario | cstergiou-dayment@alzon.ca
